

ECTLC Personal Safety Plan

Personal safety is part of the **Protect stage** of the Rhombus Model continuum of care: **Protect** → **Prepare** → **Propel**. Safety creates the structure needed for stability, growth, employment readiness, and long-term recovery.

Why Safety Matters

- Safety protects recovery before motivation becomes strong
- Safety helps stabilize emotions and decisions
- Safety strengthens housing readiness
- Safety supports movement toward responsibility and independence

Four Practical Areas Where Recovery Safety Must Be Built

Physical Safety

- Sleep schedule
- Substance-free environment
- Health routines
- Following program structure

My next step:

Emotional Safety

- Managing stress early
- Talking before problems grow
- Recognizing overwhelm
- Staying connected to support

My next step:

Relational Safety

- Choosing supportive people
- Maintaining boundaries
- Avoiding enabling influences
- Building accountability

Environmental Safety

- Following daily schedule
- Participating in work therapy
- Attending classes and meetings
- Staying engaged with structure

My next step:

My next step:

Early Warning Signs My Safety Is Weakening

- I stop following routines
- I isolate from support
- I avoid accountability
- I reconnect with unsafe environments
- I stop asking for help early

My personal warning sign:

Safety Actions I Will Use This Week

- One structure I will follow:
-

- One person I will stay connected to:
-

- One habit I will strengthen:
-

- One environment I will avoid:
-

Rhombus Model Reminder

Safety is how recovery is protected first. When safety becomes consistent, people can prepare for responsibility. When responsibility becomes consistent, people can move forward into employment, housing stability, and long-term recovery.

Facilitator: Glenn Morgan. Rhombus-aligned participant handout for Protect-stage recovery stabilization.
